Increte's METAL FX metallic pigments are pre-measured by weight and specifically packaged for addition to Increte Systems 100% solids high performance clear epoxy to create a dramatic and durable flooring surface.

METAL FX may be used with other clear coating materials such as polyurethane, acrylic sealers and water based epoxy. Use with other coating materials will produce varied effects and should be tested prior to any application.

METAL FX Pigments must be thoroughly mixed for complete dispersion. Read technical product information prior to use and follow all instructions.

NOTE: Color samples are approximate and represent application results as closely as possible. It is recommended that test samples on actual surface or with jobsite materials be made.
